

GRAVOGRAPH NEW HERMES

Wysiwyre

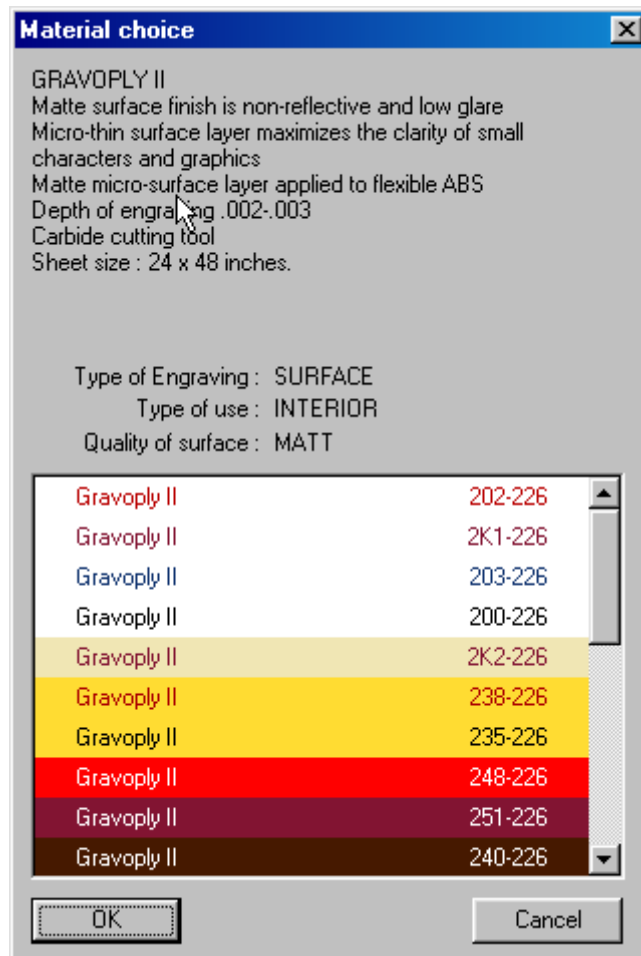

1. Wysiwyre (What You See Is What You Are Engraving) is a part of the program that allows you to see what your work will look like, right down to the color and type of material, the cutter type and the depth that your engraving.

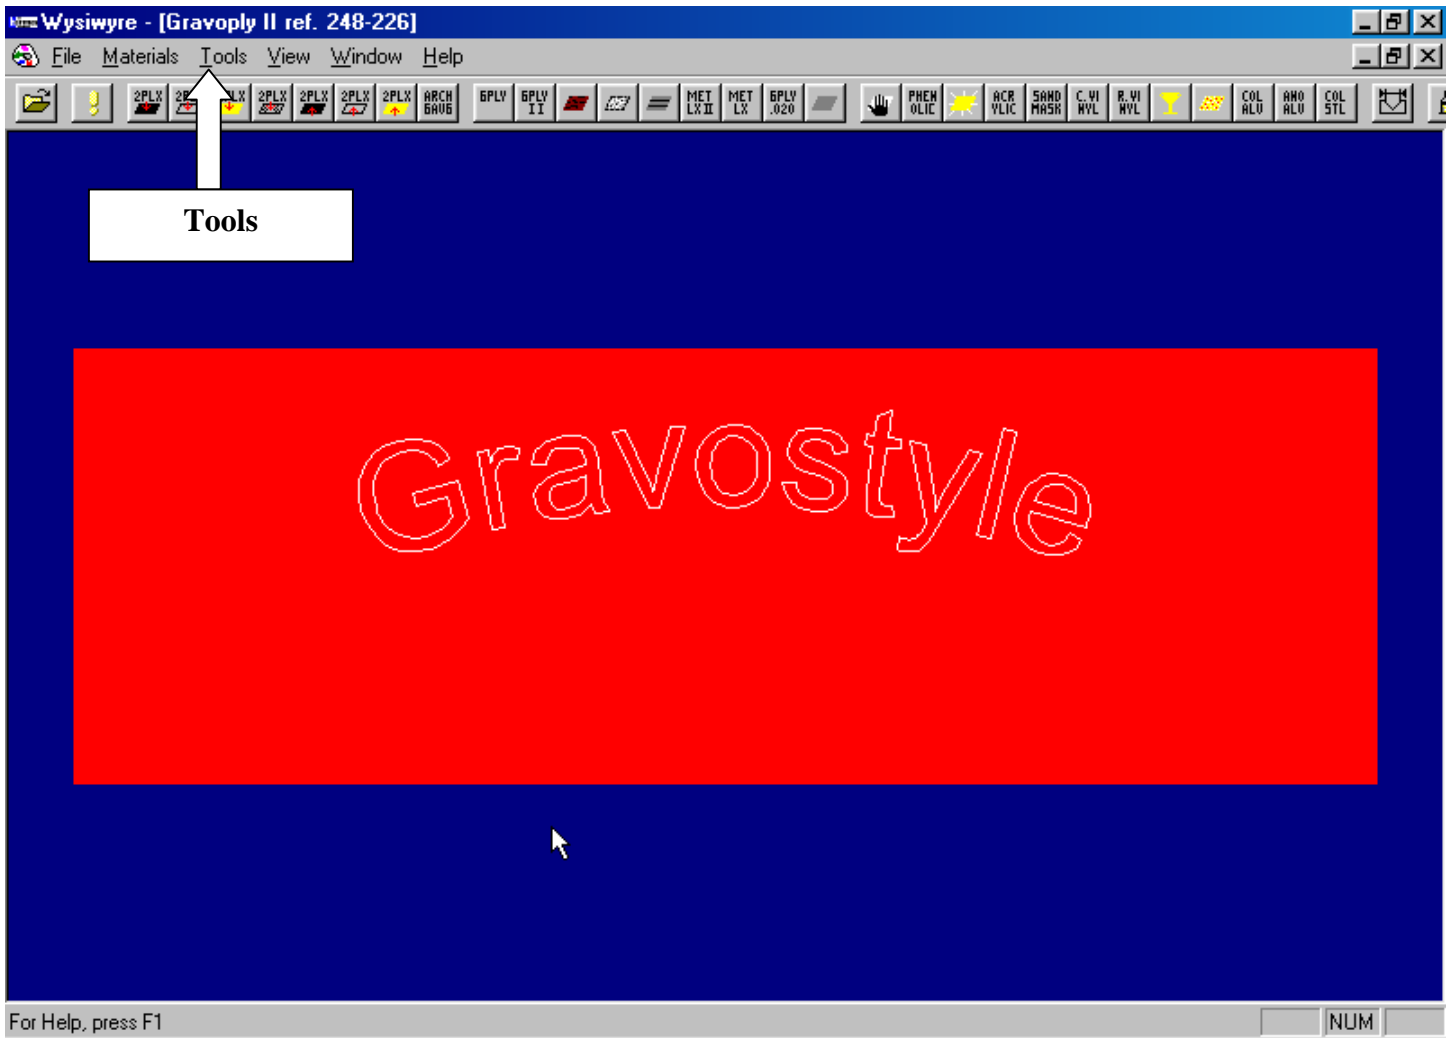

2. Wysiwyre is its own program within Gravostyle. It will be necessary to save the job before you click on the Wysiwyre button.

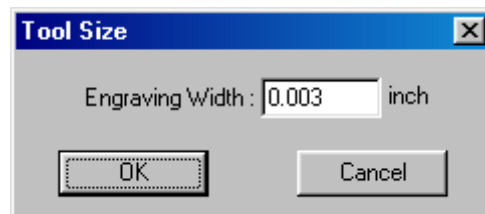

3. Select the material that you are using by clicking on the type of material button, the colors for that material type will pop up. Keep in mind you are not locked into those colors if have a special color for your customer they can be changed later. Select your color and click the OK button and the color will come up.

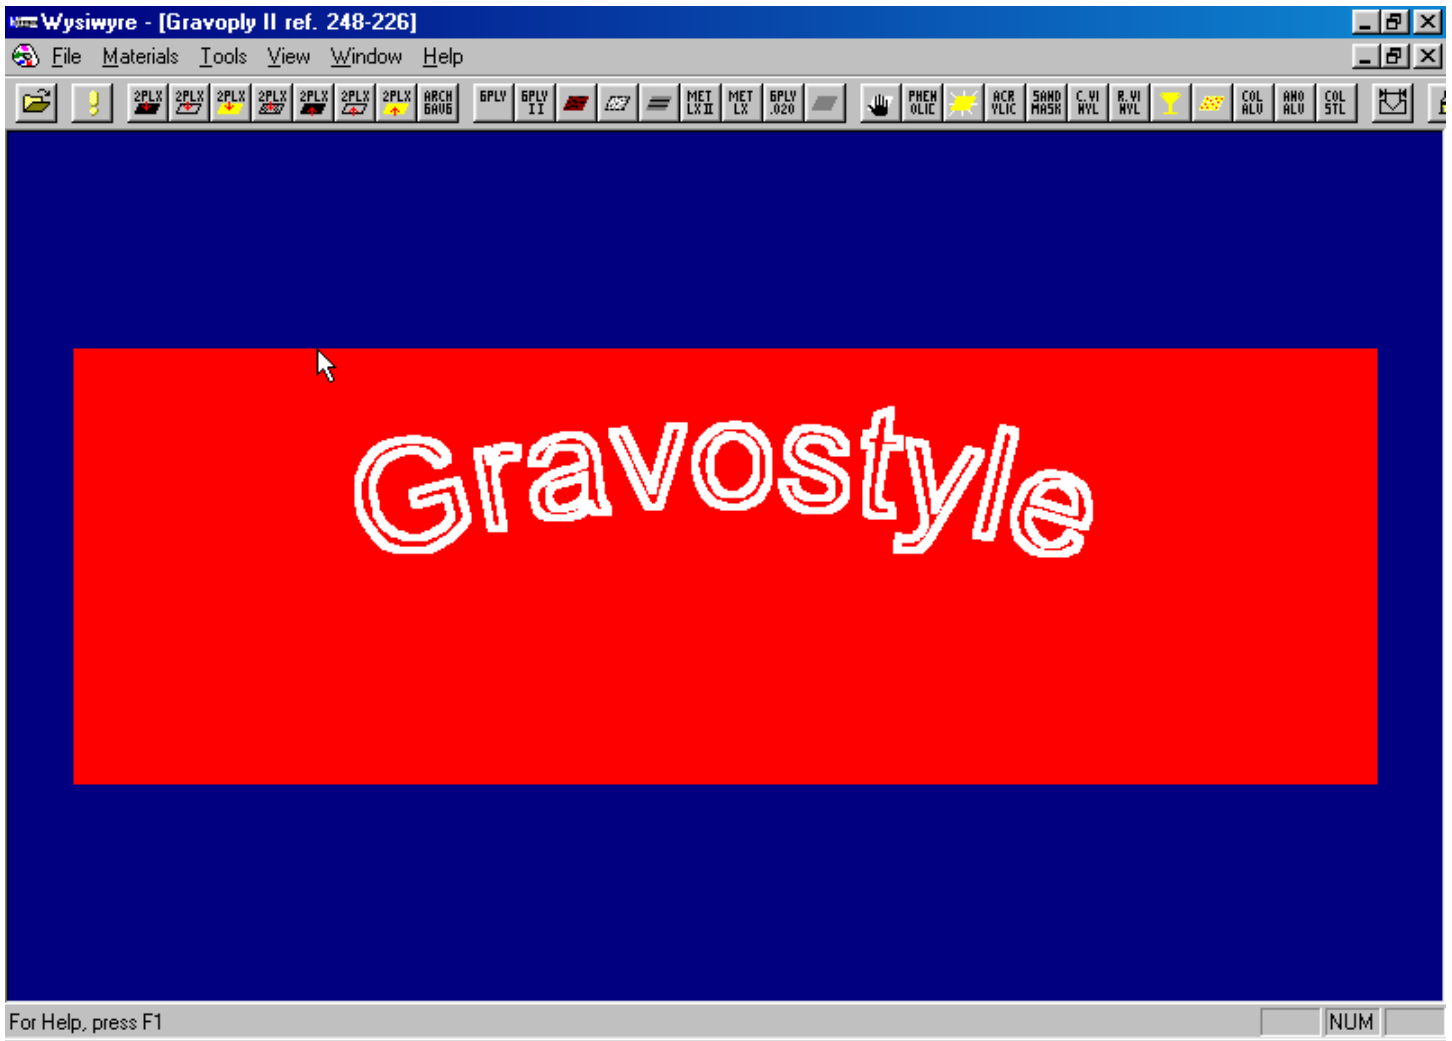

- Now we will select the tool we are going to use so that we can see the width of our lines in the material. Keep in mind though that these lines will be just deep enough to break the top cap of the material unless you modify the depth of the tool back on the main edit page of Gravostyle.

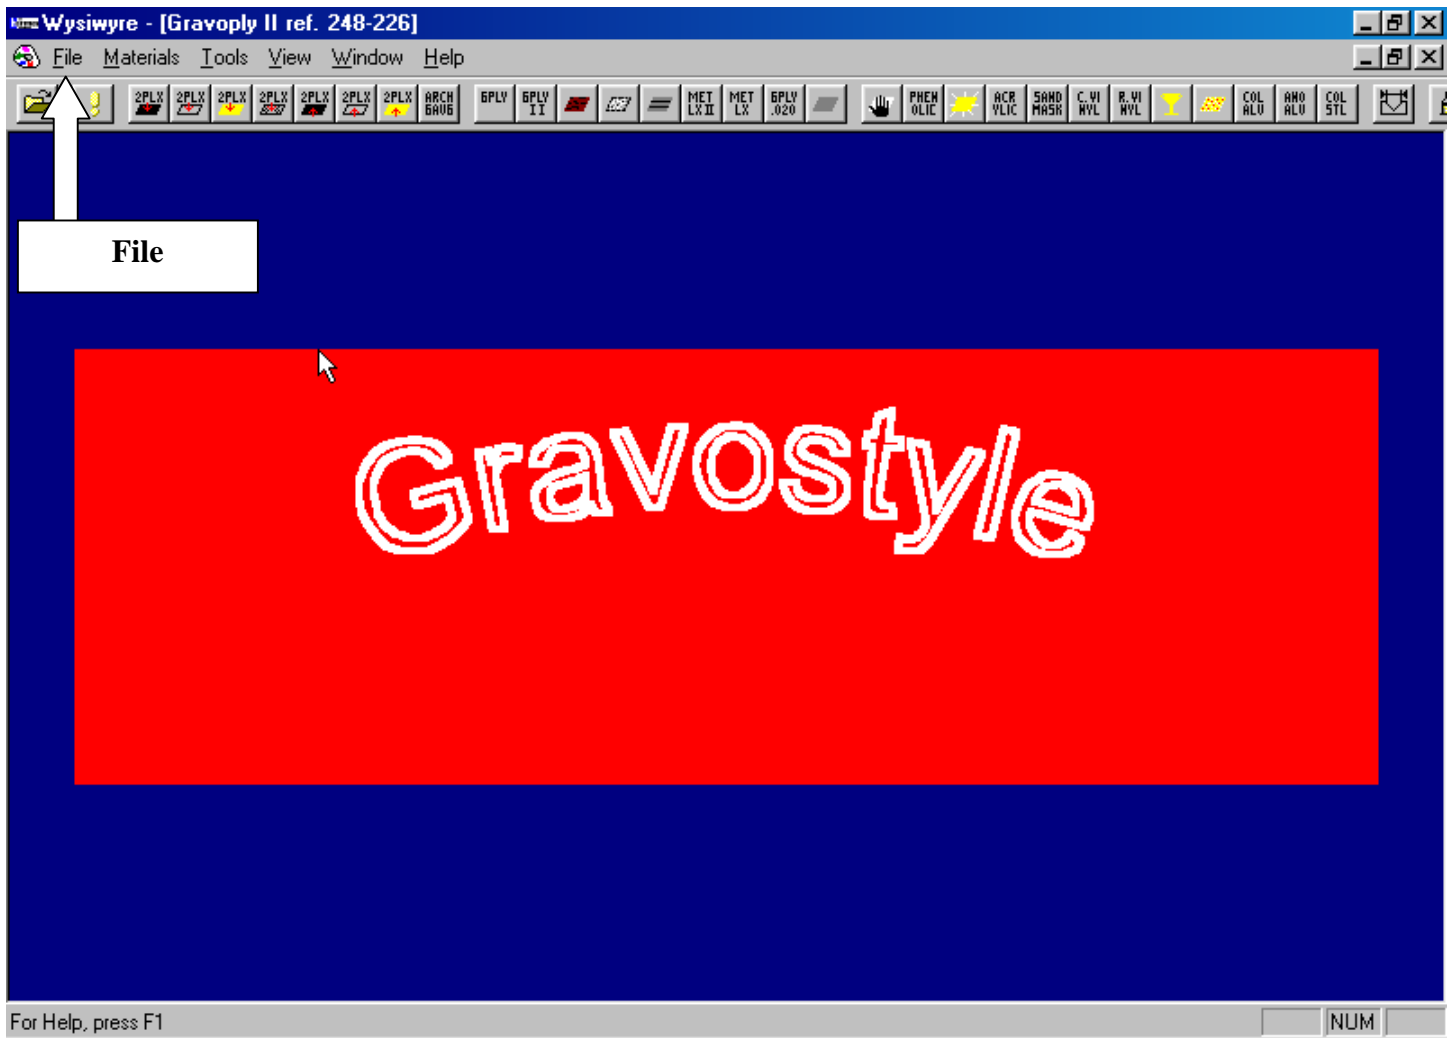

- Enter the size of the tool that you are using. Click OK.

6. Enter 0.020 to see what a 0.020 cutter will give you as far as looks is concerned.

7. You can also FAX or E-mail this screen to a customer with a quote.

- Click on File then Print. This will pull up the Printer page. This will print out the page from your regular printer so you can FAX it with a quote. If you want to use it as an E-mail attachment, then you will have to set up a printer to print to a file. Then you can attach the file to the E-mail.
